

goSmart® ResourceManager

Companies with a large number of forms and document modules need a tool for client-specific and language-specific management of electronic forms and documents.

Do you want to...

support the editorial process from request to production?

manage and version a large number of document templates and referenced resources?

seamlessly record all changes to a document and its resources?

keep track of the development status?

adapt the go-live process to your internal compliance policies?

Then goSmart® ResourceManager is the right solution for you.

The advantages at a glance:

- + Geared towards a high number of templates and referenced modules
- + Maximum security through role-based management of document resources
- + Complete traceability of all changes due to integrated version management
- + Enormous savings potential in document resource maintenance by reusable standardised modules
- + Easy to operate graphical user interface
- + Minimise time and costs and maximise test coverage with integrated test management (goSmart® TestCenter)
- + Multilingual support using the variant concept or text references (goSmart® TextRepository)

DESIGNER

Professional template design

RESOURCEMANAGER

Efficient document preparation

PROCESSMANAGER

Automated document processes

JOBMANAGER

Multichannel document processing

With goSmart® ResourceManager, you can manage and version document and form modules efficiently and effectively.

Functions and features of goSmart® ResourceManager

+ Role-based document resource management

Document resource management is organised according to the role (developer, tester, administrator, content editor, etc.) that the relevant user holds for maximum security and transparency

Document types, layouts, components, tables, text modules, graphics and charts are supported as resource types.

+ Integrated version management

All versions produced over the course of a document's life cycle are managed

Seamless documentation of all changes to a document

History function

Compare various document versions and their resources

+ Automated staging

Staging describes a minimum of three stages a document passes in the process of being created – development, testing production

Automated, adjustable and traceable staging process for developing, testing and producing document types and their resources

+ Multi-client capability

The goSmart® ResourceManager can handle multiple clients (e.g. customers, subsidiaries, branch offices, etc.) with separate user accounts in the same software installation ensuring data protection standards

Central software only installed once, which also saves on hardware and administration costs

+ Intuitive interface

Easy to set up and configure

The dashboard provides an overview of the document types in the relevant stage, and offers possible activities

Direct integration into goSmart® Designer

+ Automated production start-up

Manual or time-controlled publication of document types and their resources

Compliant evaluation of the history of productive document types and their resources

Historical evaluation of productive document types and their resource for compliance reasons
