

goSmart® TextRepository

Maximum responsiveness, minimum time to market and globalisation are what the market demands today. Innovative ways of automating customer communication are needed as a result. The traditional methods of creating document templates with rigid document structures and static text content are therefore no longer adequate for our contemporary needs.

Do you want to...

create documents in multiple languages?

manage multilingual texts easily, quickly and flexibly?

allocate languages to your documents dynamically?

be flexible about formatting your texts?

have different rights profiles for content administration, management and maintenance?

manage the various languages centrally?

Then goSmart®TextRepository is the right solution for you.

The advantages at a glance:

- + Easy to implement and administrate via web interface
- + Dynamic form and document content (automatic updates)
- + The cost of subsequent changes and revisions (spelling, terminology, style, etc.) is reduced as these are made centrally and implemented uniformly.
- + Flexible formatting options
- + Improvement of text quality
- + Integrated search function
- + Different rights profiles for content administration, management and maintenance

DESIGNER

Professional template design
